How the debugger works

1. Add breakpoints by clicking on the line numbers.
2. Hover over the variables while paused to see their value.
3. Use the buttons above to resume simulation or step one line at a time.

CODE:

```
int pinSensor=2;
int pinBuzzer=12;
void setup()
{
  Serial.begin(9600);
  pinMode(pinSensor,INPUT);
  pinMode(pinBuzzer,OUTPUT);
}

void loop()
{
  float temp_adc_val;
  temp_adc_val=analogRead(A2);
  Serial.print("Temperature=60");
  Serial.print("Degree celsius\n");
  delay(1000);
  pinSensor=digitalRead(pinSensor);
  if(pinSensor==HIGH)
  {
    tone(pinBuzzer,1000,500);
  }
  delay(10);
}
```
